

Happy Summer and more good news from ABECE!

New order of a complete roof tile plant for Dubai

We are very proud to announce that our first concrete roof tile plant for the Dubai area is underway to be delivered and installed. This plant is made for multi-profile production and has future upgrade capability for meeting high market demands. Our supply is complete; including raw materials handling, mixing station and equipment for trim and field roof tile production. For the batching and mixing system, we are working together with our South African partner, Pan Mixers SA, PMSA. Our cooperation with PMSA is strong since 2007, when we together did our first complete factory installation in South Africa. This fully automatic installation is still the factory with highest capacity in Africa. Now we are looking forward for a new successful installation and start-up of the plant in Dubai and we will come back with more reports as we move forward in the project. Our customer, UK Roof Tiles, chose to work with us because of the good reputation of outstanding quality and superb service ABECE has in the market. It is excellent to know that our customers cherish our hard work to be the Global Leader of Concrete Roof Tile Machinery.

Andreas Kinnander is strengthening our electrical team

Our inhouse electrical capability has always been a very important part of the success for ABECE since we started the journey for automated roof tile production more than 60 years ago. The foundation made over these decades has taken us this far but now we are at a new era. Therefore it is comforting to get a young but still very experienced electrician joining us. Andreas has a background from industrial and domestic installations, both from installing new systems as well as maintaining old ones. He will be responsible for our electrical workshop and inhouse machine installations, but do not get surprised if you soon see his face in your factory. We wish him a warm welcome to our ABECE family!

Summer vacation at ABECE

Even if summer is approaching in the northern hemisphere we are still diligently working with production and deliveries. From mid-June until beginning August our production crew is reduced, for everyone to have a well-deserved leave and recharge the batteries. This can cause slightly longer lead-time of spares from order to delivery, which we kindly ask your attention to when placing your order during this period.

With these good news we wish You All a very Happy and Relaxing Summer.
